Big Conference To Be Held in Medicine Hat

Under The Auspices of The Provincial Liberal Party

Extensive arrangements have been made for holding, in Medicine Hat, a conference of the electors of Medicine Hat, Edmonton, Cypress and Bow Valley constituencies under the auspices of the Provincial Liberal Party. The conference will be held on Friday, June 29th. W. R. Howson, Liberal leader, and Liberal members of the provincial legislature, will be present.

A good program has been arranged for the day. At 10 o'clock in the morning the executives of the several constituencies will meet Mr. Howson and the provincial executive in the Park Hall.

At two in the afternoon there will be presentations of resolutions and discussions on same. The public is invited to this meeting and any who have matters of interest to their respective districts will be allowed an opportunity to bring them forward at this meeting.

In the evening, commencing at 8 o'clock there will be a mass meeting in the Empire theatre. This will be addressed by W. R. Howson and Liberal members of the Legislature. An invitation is extended to all to attend this meeting.

Redcliff Girls Play Two League Games

Loss to Safeways But Win From New Club

Local Softball girls played two league games this week and the results made it hard to realize it was the same girls who played both games.

In the first game, against Safeways, on Monday, they played like a bunch of novices—with the exception of the battery—and lost out by a score of 14 to 3.

In the game with the New Club on Tuesday they handled themselves like professionals, dispatching six scoresless frames to their opponents by their airtight work in the field, and winning out by 4 runs to 2. This game was one of the best of the season as the result was in doubt to the finish.

Despite the fact that in Monday's game the local pitchers had eleven strikeouts to their credit while the visitors had only four, they lost out through poor fielding but in Tuesday's game the pitcher held almost errorless support.

Redcliff girls play their next game here next Monday with the Teco girls.

The standing in the League now is as follows:

Team	P	W	L	Pct.
Safeways	6	5	1	.833
Redcliff	7	5	2	.722
New Club	7	4	3	.571
Teco	8	0	0	0.000

Workmen from the Gas City Mills, Medicine Hat, are busy renovating the front of Mrs. E. Hicks' store.

Mrs. Wm. Moran Called By Death

Was Resident of This Town in The Early Days

Mr. and Mrs. P. Lavelle received the sad news of the death of their daughter, Mrs. Wm. Moran, at Calgary on Sunday evening. Mrs. Moran was a resident of Redcliff some years ago and is well known by a large circle of friends here. Besides her husband and parents she leaves to mourn her loss three children, one son Wm., of Lethbridge, and two daughters, Mrs. Brooks, of Taber, and Mrs. Elder, of Moose Jaw, also two sisters, Mrs. Nicholson, of Calgary and Miss May Lavelle, of Fort William. Mr. and Mrs. Lavelle left Monday morning by motor for Calgary to attend the funeral.

Crop Outlook Now Greatly Improved

Conditions More Favorable For Crop and Pasture

The entire agricultural outlook in Alberta has undergone a rather striking reversal since the last report of the department issued a fortnight ago as a result of the rains which have been general throughout most of the province since June 1st. The last report indicated very clearly that a serious situation existed in many of the southern districts as a result of the prolonged hot, dry weather, and that only immediate and substantial precipitation could save some of these districts from a disastrous crop failure. The precipitation came just in time to effect recovery, and the rains have not only substantially restored grain crops in many districts, but have greatly improved the range and pastures as well as increased the possibilities for a satisfactory production of feed crops.

VALUE OF BACON HOG IMPROVEMENT

W. A. Wilson, animal products trade commissioner for Canada in Britain, visited Alberta last week, when he took occasion to emphasize once again the importance of persistent work in improving the quality of hogs for bacon supplied for the old country market, in which Canada has now been given a substantial quota. This is in line with the intensive campaign conducted jointly by the federal and provincial agricultural authorities during the past six months among the farmers of the province for the improvement of quality in hog production.

Mrs. J. Hope received the sad news of the death of her sister, Mrs. Blair, in Delburn yesterday. Mrs. Blair had been in poor health for some time but hopes were held for her recovery. The sympathy of the community is extended to Mr. and Mrs. Hope and the David boys who are brothers of the deceased. Mr. and Mrs. Hope, Mr. and Mrs. J. Davies, Mr. and Mrs. R. Davies and Mr. Johnny Davies left at once for Delburn.

The Week at Ottawa

Ottawa, May 29th, 1934

If Canadians are only permitted to grow the amount of food products that they themselves can consume disaster would befall the farmers of the West. Although the difficulty of finding a market, the clouds clearing, France once purchased 30 million bushels of Canadian wheat annually. Now she is exporting and has a duty of \$1.14 against our wheat. Her representative said at home a few days ago that she would reduce her wheat acreage and lower the barriers if her products were more buying of her products by the wheat exporting countries.

In the United Kingdom wheat can be bought for two shillings yet home grown wheat is being sold at the extent of 3 shillings and 6 pence per bushel. This, of course, means heavy losses to pay the bonus. It is the policy of the relentless policy of Mr. Elliott, Minister of Agriculture, to make Great Britain self sufficient as regards national products.

In Bulgaria the State has an exclusive monopoly in the purchase and sale of wheat both at home and abroad. The board in charge pay more than world prices and export at great loss to the taxpayer. This result is that the cost of living is high and those not producing wheat find that they cannot make ends meet so that actual famine exists in many of the villages. The remedy, would seem to be to induce the growers of Europe to buy our good elegant wheat and for us to buy from them the products they can produce so efficiently.

We need their products because in 1928 the average value of clothing bought for each Canadian family was \$225 and in 1933 this had dropped to \$95. In furniture the drop was from \$54 to \$6 per family. Similar reductions in home consumption can be found over a wide range of commodities.

Sincerely
F. W. Gershaw

Capitol Wisdom, Readers Digest

When we can't make light of our troubles, we can keep them dark.

Happiness is like jam, you can't spread it even little without getting some on yourself.

It often shows a fine command of language to say nothing.

Of all the things you wear your expression is the most important.

BRITAIN WILL NOT HAND OVER TERRITORY

Once again the fact that Britain has no intention of handing over Bermuda or any other territory in payment of war debts to the United States was settled Monday in the Imperial Parliament. The prime minister left no doubt on this point when the question came up in the House of Commons.

Daddies and Daughters Play Tie in Softball

An attack of sore joints and twisted muscles more or less disorganized the Daddies in their return game with the girls softballers last Friday evening. As a result the best they could do was to keep the score down to a tie of 12 runs each.

The girls showed a slight improvement over the previous game while the Daddies appeared to have slipped a little.

However, it was a good game to watch, furnishing considerable amusement for the spectators and adding a few shekels to the girls' treasury.

The battery for the girls put up a good game but unfortunately two of their catchers got rusty cracks in the eye from foul tips. All will be glad to know their injuries were not serious.

Ballantyne, Barr and Wyatt were the weak sisters for the Daddies. The best they could do was to knock out two and force batters and make only double plays in the field. The rest of the team put up a mappy game except for a series of errors in every frame. Hodge at centre forward caught every thing that came his way.

UNITED KINGDOM NOW NEEDS RAIN

The United Kingdom, Monday afflicted with growing alarm a wave of intensely hot weather that aggravated already serious drought conditions and caused acute discomfort throughout the country.

Sunday, the hottest day of the year, the thermometer rose to 87 in London, while most of the country sought shelter from 15 hours' continuous sunshine. Meteorologists said there was no sign of rain.

Redcliff Reminiscences

Taken From The Review File of June 25th, 1915

BIRTHS

Armstrong—In Redcliff, on Tuesday, June 22nd, 1915, to Mr. and Mrs. Walter Armstrong a son.

The local band, under the leadership of W. Connell, is making splendid progress.

Jack Jones, brother of Mrs. Joe. Kitchen is reported to be wounded.

The Tennis Court at the Gay Products is the busiest place in town these evenings.

The Prince of Wales had his 21st birthday last Wednesday.

A number of citizens were awakened from their peaceful slumbers last Friday about midnight by a series of weird chants and hi-hais. In the morning it was learned that a band of Indians from the Northwest were passing through town to their summer tea-pee west of here.

How is your subscription?

Result of High School Exams Held So Far

The following is a statement of the marks obtained by pupils in the local high school on the final promotion examinations. These papers are marked by the school principal, whereas those of the senior high school units are sent to Edmonton for evaluation, results of which will not be known until about August 1st. The pass mark required in each unit is 50% and students obtaining 75% or over are given honors standing.

Literature 1—Honors

Doris Wyatt, 92; Douglas Lenning, 90; Susan Skidmore, 79; Curtis Buchholz, 75.

No failures.

Science 1—Honors

Douglas Lenning, 86; Doris Wyatt, 85; Jack Brydie, 82; Curtis Buchholz, 80.

Failed: Susan Skidmore, 41.

French 1—Honors

Velma J. Trembath, 83; Elsie Blades, 77.

Passed: Douglas Lenning, 74; Doris Wyatt, 73; Curtis Buchholz, 62; Keith Ellis, 61; Reva Garner, 60; Mary Broughton 58.

No failures.

Literature 2—Honors

Holmer Kaldstad, 85; Phyllis Sheldon, 75.

Passed: Elsie Blades, 73; Velma J. Trembath, 72; Leslie Leppard, 63; June Maillard, 62; Reva Garner, 62; Mary Further 57.

Failed: Graham Ellis, 46.

Elinor Learmonth, 44.

Results of History 1, Algebra 1, Geometry 1, Composition 1 and 2, will follow in next week's issue.

Liberals Make Clean Sweep in Elections

Both Ontario and Saskatchewan Go Strongly Liberal

Liberals in both Ontario and Saskatchewan made clean sweeps in the general elections held on Tuesday.

In Saskatchewan their victory was overwhelming as not a representative of the Conservative party was elected.

An outstanding result of both elections is that only one C.C.F. candidate in all was elected. This one was in Ontario where also only one U.F.O., candidate was elected. In Saskatchewan only 5 Farmer-Labor candidates were elected. These five will constitute the official opposition.

The standing to date is as follows: Ontario—Liberals 65, Conservative—17, Liberal-Progressive—4, C.C.F.—1, Independent—1, U.F.O.—1, Liberal-Labor—1, Total 90. Saskatchewan—Liberals 49, Farmer-Labor 5, Deferred 1, Total seats 55.

The marketing bill has passed its third reading in the Federal House. The primary object of the bill is to secure for producers a market as free as possible from unnecessary fluctuations. It is intended to safeguard producers, distributors and consumers, to the financial advantage of the first but without unfairness to the others.

Jubilee Celebration Of Qu'Appelle Diocese

Special Services To Be Held In St. Ambrose, Sunday

On Sunday next, June 24th, (St. John Baptist Day) St. Ambrose Church, in keeping with all Anglican churches throughout the diocese of Qu'Appelle, will observe a jubilee celebration on the anniversary of the formation of the diocese.

Jubilee services will be held to which all friends of the church are most heartily invited. A list of the services at St. Ambrose is given under the usual church notices.

On this the Golden Jubilee of the Diocese much progress has been made. After 50 years of service to God and man, we now celebrate a great victory. About 130 Priests are working in the Diocese together with a large number of Lay-workers. About 14,000 children are receiving Lessons month by month from the Sunday School by Post and two Sunday School Mission Vans are working in the Diocese during the summer months. Over 300 Stations are served regularly in the Diocese whose borders are now from the U.S.A. boundary in the South to the line between Townships 34 and 35 in the North and between the Manitoba border in the East and 60 miles over the Alberta border in the West.

"Miss Fane's Baby" Film Packs Wallop

Bringing to the screen for the first time in motion picture history the dread threat that has swept the nation, coincident with the kidnapping of children, "Miss Fane's Baby is Stolen" opens Monday at the Monarch Theatre.

A glamorous mother's terror was pictured through the eyes of alluring Dorothea Weick portraying a Hollywood actress, whose child, Baby LeRoy, is torn from her.

Alice Brady, co-starred with Miss Weick, stands out as a dramatic character in the cast of thirty famous players, enacting the role of the heroic farm woman who suddenly finds herself confronted by a trio of ruthless kidnappers.

Jack LaRue, Dorothea Burgess and Alan Hale are the kidnapers against whom Miss Brady finds herself pitted in a gallant attempt to save baby LeRoy from death.

"Miss Fane's Baby is Stolen" is a picture which embodies unparalleled entertainment for adults and children alike.

In addition, on this program the McLarnin-Ross Fight Pictures are shown and also the Film "Itchy Scratchy" an exceptional film about a bear.

The Farmers' Creditors Arrangement Act, now before the House of Commons, makes provision for a composition, extension of time or scheme of arrangement in the case of farms who are unable to meet their liabilities when due. The measure is of very great importance to all business men in the west.

Thrifty Housewives Buy Quality

are becoming larger and more powerful. The honor of having the biggest goes to Russia.

"Fresh from the Gardens"

That "Bought and Paid For" Idea

There is a curious persistence in the idea current in certain parts of Eastern Canada, that the older provinces of Confederation have proprietary interests in the prairie provinces by "rights of purchase."

Just recently, a storm which raged West against East, broke in the House of Commons at Ottawa, when relief and other expenditures required by Western Canada were under consideration. During the discussion, "bought and paid for" mentality was prominently in evidence, according to newspaper despatches. It appears inevitable that, when any expenditure which may be construed as exclusively Western is made in the federal parliament, some member from one of the older provinces, impelled by this idea, seems bound to object on the ground that the prairie provinces are not entitled to further consideration—and terms such as "blood-suckers" are applied, indifferently and with reckless abandon, to governments and people of the West.

Forgotten in the heat of debate is the amazing part which the West has played in the material advancement of the Dominion. Forgotten, for the time being, is the classic contention which the wheat-growing prairies have made to the wealth of Canada. Forgotten are the tremendous expenditures made, by the Dominion as a whole, for works, projects and purposes which may be construed as exclusively Eastern. Forgotten is the use made of the resources of the West in the building of great transportation systems of advantage to the whole of Canada. Forgotten is the influence of prairie purchasing power upon the industrial development of the East. Forgotten, too, is the fact that the West's present needs are due to the dire extremity of many of its people—a condition they certainly did not seek and did nothing to create. The "right of purchase" idea reigns paramount over all others when tempers are frayed and local loyalties to the ascendancy. In one breath it is admitted that the prairie section has contributed more to the wealth of Canada in a specified period than any other component part of the Dominion. In the next, the prairie is branded as "blood-suckers," draining, as it were, the coffers of Canada which, by implication, apparently are filled solely by the contributions made by the older, Eastern provinces.

The idea, of course, has its roots in the historical charter granted by Charles II. of England, in 1670, to the Hudson Bay Company, which conferred upon that company "rights in the territory tributary to the rivers draining into the Hudson Bay"—including rights and rights of the government. These rights the company exercised in the territory known as Rupert's Land for some two hundred years.

When, however, Confederation became an accomplished fact in 1867, the Canadian parliament, pursuant to the great vision of a United Canada stretching from ocean to ocean, initiated negotiations with the Imperial Government at London with a view to acquiring possession of the territory held under this charter by the Hudson Bay Company. The British Government agreed to the request on condition that the arrangement entered into would not involve expenditure by the Imperial Treasury, and on the further condition that there should be no surrender of territory until the terms had been agreed upon.

Negotiations with the Company proceeded for two years, during which time it held out for a cash payment of \$500,000 (approximately \$1,500,000), as one of the terms under which it was prepared to relinquish its rights in the territory. The Canadian Government, then representing the entire provinces of Confederation, borrowed the required sum on bond issues which matured in 1864. The money being paid, the Company surrendered its rights under the charter, and Canada stretched one indivisible from the Atlantic littoral to the Pacific seaboard. That is the story, that the genesis of this "bought and paid for" idea which crops up, ever and anon, during debate in the federal parliament.

Obviously, \$1,500,000 is a ridiculously small sum against which to assess a claim of proprietary rights of purchase in the entire prairie section of Canada. It is ridiculously small not only in proportion to the wealth produced normally each year in the farming wheat field of the West. It is ridiculously small not only in proportion to the contribution made by the "purchaser" territories to the aggregate wealth of the Dominion. It is ridiculously small in comparison with the annual contributions made by the Western provinces to the revenues of Canada. That the idea should survive at all in the face of recent history is incomprehensible to Western minds. That it should be used so justly opposite to present claims of certain sections of the prairie in their extremity, is concentrated not only the mental poverty of the objector, but a naive ignorance of obvious facts. Recent economic experience has proved that, instead of the East holding the West in fee, the reverse is close to the truth.

Italy To Build Battleships

Three large fighting ships to be built under Washington Treaty. Italy will construct three large battleships, with general specifications similar to those of the French battleships. It was disclosed by naval officials.

The new vessels will be completed by 1916 and will cost about \$55,000,000. Their construction will be a part of a program outlined by Premier Mussolini in an address before the chamber in which he stated that Italy proposes to utilize the Washington treaty.

The premier estimated the expenditure will total 1,000,000,000 lire. This capital expenditure will be in addition to approving outlays for modernizing old battleships between now and 1916.

Household Drudgery
The Bane of a Woman's Life

Many modern women to be strong and healthy instead of weak and sickly, but how can a woman have good health when she has to go through the household drudgery without any relaxation. Is it any wonder she becomes nervous and irritable, has lost her appetite and sleep, and is constantly complaining of aching and numbing sensations, and can't sleep at night?

Women who are weak and run down will find in Milburn's H. & N. Pills a remedy to strengthen the system and bring back the much desired health.

MILBURN'S
HEALTH
NERVE PILLS

World's Largest Flying Boats

Russia Leads With Britain Second And United States Third

Like everything else airplanes are becoming larger and more powerful. The honor of having the biggest goes to Russia.

The Russians have almost completed at Moscow a flying boat—its name is called a flying liner—it is named the "Maksim Gorki." It will provide accommodation for 70 passengers and will have a crew of six. It will have a moving picture "auditorium," and a room for developing photographs. The pilot will sit in a conning tower above the wings so that he will have an uninterrupted view.

Great Britain furnishes the second largest, the "Bylla," which is almost ready. It will carry 30 passengers and a crew of five. Among other things it will have a smoking compartment.

The United States comes third with the S-43, built at Bridgeport, Conn., by the Sikorsky Company. It carries 32 passengers and a crew of five. It has a full-bottomed hull, 100 miles non-stop, and can also carry 1,000 pounds of freight.—St. Thomas Times-Journal.

"PERSONS NOT FAT
LIVE LONGEST"

Eminent Physician Declares

In a recent lecture before the American Academy of Medicine, a prominent physician stated that persons who aren't fat live the longest.

Common sense confirms this. Intelligent persons who are fat and eat too much weight foods, or charge higher premiums on account of the risk. Fat people and weak bodies are a bad combination. It is a fact that a body of fatness (even rheumatism, acidity, indigestion, etc.) and a host of ailments are associated with it.

So get rid of this dangerous, unhealthy fat. Try to reason why you should, when science has given you this fact. A body of fatness is a half teaspoonful of Kruschen Salt in a glass of hot water first thing every morning.

This healthy "little daily dose" of Kruschen keeps the system free from harmful toxins, it helps to re-establish the normal balance of the body. It keeps you feeling fine and healthy. It keeps you feeling fine and healthy. It keeps you feeling fine and healthy.

Vaccine For Tuberculosis

New Preparation Being Tested On Cattle In Ireland

Experiments to find a cure for tuberculosis in cattle continue in various parts of the world. The Spahlgauer vaccine, of which much was heard two or three years ago, is now being tested in Ireland. A small number of cattle have been vaccinated in Northern Ireland under official supervision. The vaccine is made from the tubercle bacilli of the cow. It is a preparation of the tubercle bacilli of the cow. It is a preparation of the tubercle bacilli of the cow.

As the United Kingdom is now embarking on a campaign to rid the country of its dairy herds and to eradicate tuberculosis, the final results of the Ulster trial seem likely to offer an economical and practicable means of immunizing dairy cattle against tuberculosis and gradually ridding the country of a scourge which is costly to public health and farmers.

Dwarfs Holding Congress

Likely To Take Place In Budapest

Fired by the Nazi doctrine of racial purity, dwarfs of Hungary have formed a National Union of Dwarfs. They are now holding a congress in Budapest. The dwarfs of the world to a Dwarf Congress which is to be held, probably in Budapest, next year. Their creed is to "preserve the purity of the dwarf race," to forbid marriage with normally-statured people, and to demand laws that will give them houses for all their folk. Their leaders, it is said, are to be 20 inches tall.

Invention For Radio Fans

Dr. Nevil M. Hopkins, of New York University, is the inventor of a new electrical device which he claims will revolutionize the radio broadcasting industry. He calls it the "televisor" and by use of this instrument, a listener-in on a broadcast can, by pressing a button, immediately transfer the station he is listening to the station he desires. He claims that this reaction to the program being presented.

All tree squirrels make nests of twigs and leaves among tree branches.

Fulfilling Father's Hopes

Captain Scott's Son Makes Story Of National History

Twenty-two years ago Captain Scott, one of the greatest English explorers of all time, lay dying in a tent in the Antarctic.

The last letter he wrote was to his wife. He spoke of the day when Peter, "make the boy interested in national history if you can," he said.

Peter Scott is 24 now. He has fulfilled his father's hopes. Recently he opened in Bond Street, London, the second exhibition of paintings of bird life.

The grey light of dawn is there; the midday, the almost crepuscular, the ebb of the tide, and eerie, plaintive notes. The curlew calls; you can hear the piping of awkward-looking redshank and stint. Grey-green, V-shaped into the sky and flight downward to the fresh marshes of the mainland.

It is a world of thrills to the mere wildflower. It is a world of exultation to July and to the naturalists, which is what Peter Scott has become.

He shoots little now, as he said recently, but night and day the bird through, lies in a scopoped-out hole in the Waik, or huddles in a pit of tall marshes, waiting for the fleeting visions he has captured in paint.

The Grasshopper Campaigns

Provincial And Federal Organizations To Deal With Menace

The Manitoba Insect Pest Review for May of the Dominion Entomological Branch in the 1933 summary of insect outbreaks that show states with reference to grasshoppers. The control campaigns involving the use of poisoned baits were actively carried out in most areas where the pest was a serious menace. The destruction of vast numbers of grasshoppers and the material saving of crops and pastures have been considerable. In July and August, extensive dispersal flights of grasshoppers occurred in many parts of the province. They have been considerably allayed in the open prairie land of the three Prairie provinces is now involved, and the areas of severe infestation have been considerably reduced, except in Eastern Manitoba where there was an encouraging report. It is expected that during 1934 the outbreak will be even more intense and destructive than that of 1933, and consequently the Provincial and Dominion authorities are organizing a comprehensive campaign to deal with it.

Dredging For Gold

Work To Be Started On Jugoslav-Numeeh Border

Modern miners are to attempt to dredge the River Pek on the Jugoslav-Rumanian border, on the bed of which gold has been settling for more than 2,000 years. Up this river, named Jaan and its Argonaunts from the time of the Argonauts, the place of their quest is to legend to dredge, for the peasants of the Pek River Valley seek adventures in the gold which has been settling for more than 2,000 years. Up this river, named Jaan and its Argonaunts from the time of the Argonauts, the place of their quest is to legend to dredge, for the peasants of the Pek River Valley seek adventures in the gold which has been settling for more than 2,000 years. A Closely Guarded Secret

Germany is closely guarding its experiments with radio-controlled airplanes. It is reported that successful flights were made by a machine entirely without a crew, directed by means of a radio. The tests were made by a radio, directed by means of a radio. The tests were made by a radio, directed by means of a radio.

"Too bad about Jane and the man she's engaged to. Neither one of them is good enough for the other." "Where did you get that idea?" "I've been talking the matter over with both families."

The world is wide, but there are lots of narrow people in it.

Still Works At Ninety

Blacksmith Not Kilo Even If Son Runs Business

Partnership of Kemp and Ben, village blacksmiths at Worlington, worth, England, has been to the verge of the official notice, "discovered by mutual consent," but a man who worked hard as a blacksmith even in his ninetieth year will not be altogether idle. It was not lack of business that caused the firm to disband. Far from it, but simply that Samuel Kemp was 90 and came to the opinion that his boy, James, was old enough to carry on. Samuel Kemp, however, does not intend to retire, "because," he says, "you can't trust these boys." He has labored 78 years continuous work at the forge. Up to the time the official notice of the business partnership was published he used a sledge hammer. Next day he was, soldering tacks.

Canada's Agricultural Revenue

Decrease Last Year Of Over Four Millions From Previous Year

The total gross agricultural revenue of Canada for 1933 is estimated at \$764,700,000 as compared with \$796,700,000 for 1932, and \$836,114,000 for 1931. This represents a decrease of \$4,992,000, or 0.6 per cent, from 1932. There are increases in the revenue from farm animals, wool, dairy products, fur farming, honey, clover, and grass seed, and decrease in the revenue from field crops, fruits and vegetables, poultry and eggs, maple products, tobacco, and fax fibre. The greatest increase are from farm animals and dairy products, while the biggest decreases in revenue are shown in field crops and poultry and eggs.

Belgium Looking To

Join Countries Who Have Given Up Disarmament Idea

Add Belgium to the list of countries, large and small, which have abandoned all talk of disarmament and are concentrating on the revenue. In Belgium the chief political issue just now seems to be the exact nature of the policy of national defence which shall be adopted. Within the past year and a half this small power has spent no less than \$50,000,000 equipping its German border.

Greatly Increased Riches

Higher Gold Price Made Vast Difference To Indian Prince

It is due largely to President Roosevelt that an Indian prince, the Niaman of Hudson, is much richer than he was a year ago. Locked up in his riches is a great quantity of gold in coin and bullion. Early last year its value was estimated at \$500,000,000. Since then the price of gold has increased about 60 per cent, as a result of the action of the United States in fixing a higher price for gold. The Niaman's hoard is now estimated worth \$800,000,000.

Has Regular Zoo

Pity the prowler who breaks into the room of Kenneth Johnson, University of California student. Johnson, who aspires to be a zoo keeper, keeps eight snakes, a black widow spider, and a Gila monster in his bedroom. The girls have the run of the bedroom. Johnson studies the best way to make them happy, and improve their intelligence by running them through mazes.

Good Friend To Horses

When Policeman M. Woodrow prosecuted John H. Woodrow for driving a pony it made the 10th street judge had befriended in court. Woodrow has been on the London force for 20 years. A lover of horses, he watches for cases of cruelty and brings the offenders before the law.

Dreams Of A Startling Future

Nicola Tesla On Verge Of Announcing New Discoveries

It is all very hazy, of course, but when Nicola Tesla says he "is on the verge of announcing a new invention of incalculable benefit to the world," the world is warranted in sitting up and taking notice. For the wonders that Tesla has performed in the past are to be considered as an indication of the wonders he may perform in the future. The Italian genius who is prepared to startle the world with four new inventions which are likely to provide him with many millions. With these millions he will proceed to put some of his earlier discoveries on a commercial basis. Chief among these, we take it, he rates the transmission of power by wireless. Tesla remarks that with his discovery put on a commercial basis, the flying machine of tomorrow, freed from the gasoline motor, will be utilized cruising radius by drawing on transmitted power. And, of course, that would be only one of many possible wonders. Electricity reduced to terms of power already entered into our daily lives in so many forms that the old awaiting development of Tesla's wireless power transmission is practically without limit. So, although, Tesla said at the outset, the Tesla announcement is somewhat hazy, it is clear enough to start vivid dreams of a startling future. Buffalo Courier.

Has Regular Zoo

Pity the prowler who breaks into the room of Kenneth Johnson, University of California student. Johnson, who aspires to be a zoo keeper, keeps eight snakes, a black widow spider, and a Gila monster in his bedroom. The girls have the run of the bedroom. Johnson studies the best way to make them happy, and improve their intelligence by running them through mazes.

Good Friend To Horses

When Policeman M. Woodrow prosecuted John H. Woodrow for driving a pony it made the 10th street judge had befriended in court. Woodrow has been on the London force for 20 years. A lover of horses, he watches for cases of cruelty and brings the offenders before the law.

W. N. U. 2049

The British Imperial Policy Has Been One Of The Greatest Factors For Maintaining World Peace

The British Empire has not followed a "policy of drift" in international affairs since the war, Prime Minister R. B. Bennett asserted before a meeting of the League of Nations Society in Canada, at Ottawa. Its policy had been one of maintaining the peace of the world and the solidarity of the Empire. He believed that the British Empire had been one of the greatest factors for peace and he expressed the view that under present conditions a "League of Amity" made up of the United States and the nations tying the British flag would be a tremendous factor for peace.

The prime minister spoke briefly at a luncheon at the society addressed by E. Reid, secretary of the Canadian Institute of International Affairs. Speaking on "A Foreign Policy for Canada," Mr. Reid asserted that it is about time that we stopped talking about what Great Britain, or France, or the United States should do. "Citizens of Canada could exert a direct influence over only one government. That was the government of their own country."

He expressed the belief that the League of Nations had not dealt with basic reasons for disputes, and that it had allowed time to become an instrument of the allied powers against the "proletarian powers." Thus he said that power was being taken away from the people of the world and that many and Italy were withdrawing their active support from the League.

In looking over world conditions, Mr. Reid painted a picture of the world as it is today. He said that the world was going to the future, and that the machinery which it had set up to prevent war.

Senator A. D. McLean, who moved in the senate that Canada withdraw from the League of Nations, was to be congratulated on the fact that he refused to accept a policy of drift. Mr. Reid said: But if Canada withdrew from the League, could Great Britain also withdraw, and if she did would it exempt her from being drawn into European wars, and finally, if Great Britain was drawn into another first class war, could Canada stay out. The only reason for Canada, in the event of Great Britain being drawn into another war, appeared to be between Canada and secession from the Empire.

If Canada seceded from the British Empire, Mr. Reid suggested that the country would be dependent on the United States for defence. The Dominion might eventually become a protectorate of the republic.

But was the world situation hopeless as far as maintaining peace was concerned? There were steps which could be taken which could help, and Canada should be willing to do her share. The Dominion, said Mr. Reid, must be willing to make necessary sacrifices. This country might, for instance, repeal the provisions of the Chinese Immigration Act, and substitute an agreement like that with Japan under which 150 Chinese would be admitted every year. Canada might be willing to accept the mandatory principle in respect to British possessions thus sacrificing the tariff preferences at present prevailing. The Dominion should be ready to do her part.

Mr. Bennett opened his remarks by saying that he was minister of external affairs of Canada because of a statute and not by choice. This statute declared that the prime minister must also be minister of external affairs. He mentioned this because some people appeared to think he had allocated the department to himself. He had not done so.

He thought that Mr. Reid had offered a violent indictment of the League of Nations. It must be remembered that the world was confronted with conditions and not theories. There was a very considerable body in the House of Commons and senate which felt that the expenditure of Canada on the League of Nations was out of proportion to the benefits received. He was not one of these, said Mr. Bennett, because he realized that it amounted to only about the cost of two days of the last war.

The policy followed in the British Empire was one of maintaining the peace of the world and the solidarity of the Empire. He believed that the British Empire had been a great factor for peace. He warned the audience that the world moved slowly, but it progressed. The progress, he believed, had been slow and steady.

Australia's "Costly Failure"

Demonstration Farm With All Buildings Has Been Leased

For five shillings a week rent and lump payment of about \$629 for improvements, the Australian government has leased its "costliest failure" otherwise, its \$100,000 demonstration farm at Batchelor. The sale comprises 2,553 acres of land at the farm, all the buildings and the household of 48 square miles of territory adjoining. The farm was established in 1912 and was a complete failure in most respects. Costly pedigree stock were killed by pests or bogged in the wet season; the sheep were killed by grass seeds, and dairy cattle died of heat or were eaten by crocodiles. While animals, stables, machinery sheds and other buildings were a complete disappointment, pineapples, citrus and tropical fruits flourished with irrigation. The purchaser, J. Gaden, will use the farm to pasture his horses in the wet season.

FASCINATING SUMMER SPORTS

There's something too in bottomed front closing.

You can indulge in numbers of smart blouses with today's pattern. Most come in bright colors and another in red and white handkerchief-finish lawn print and perhaps a third in yellow and blue printed cotton. Each blouse will appear to be different. And think of it—you can have the three blouses for about the cost of one ready-made blouse.

Gingham, seersucker, organdy, novelty, silk, etc., are also suitable.

Size 8, 8.5 is designed for sizes 14, 16, 18, 20, 22, 24 and 26 inches bust. Size 16 requires 1½ yards of 38-inch material.

Price of pattern 20 cents in stamps or cash, as preferred. Write cup care fully.

Green Candles Light

Found Most Suitable And Its Use Is Increasing

The Dominion Department of Agriculture, recognizing the importance of standardizing egg candling equipment in Canada, initiated investigations as to the most suitable light for that purpose, and, as an outcome of research by the National Research Council, a green glass filter has been evolved. Within recent months, this use of a green light has gained considerable popularity in the Dominion. Many commercial firms have adopted it in their candling rooms, and green light candling appliances are being used exclusively by departmental officers. The ideal light, it is stated, would be blue, because blue does not contain any of the yolk color of the egg. However, the human eye is not very sensitive to blue and for that reason blue is an undesirable color for candling purposes.

When the world's too poor to be tempted it will begin to grow better.

What The Times Demand

A Constructive Program Of Action.

"I am tired of the blundering by men that we have looked upon as leaders; men who should have tackled the job of getting people productive work," said Dr. W. W. Swann, professor of economics at Saskatchewan University, in an address to the retail merchants at Moose Jaw.

"It's all right to have sympathy for the underdog and for men on relief but what the times demand is a constructive program of action. We have had enough of the fumbling and 'halting measure' of men in Canada and the United States. It's a great tragedy that the London economic conference adjourned without having accomplished one single thing."

"The world is trembling at the edge of an abyss and men are looking for leadership. The time has come to remedy these conditions. We should remedy the unsatisfactory conditions in business and make it possible in the West to permit the merchant to contribute his part in the life of the community and the nation."

"We have had an unbalanced development in the Dominion. The wealth has been built up. That wealth should have stayed in the West and the fact that it has gone indicates an unhealthy development. You cannot make the West until you restore property among our farmers and the people of our villages and hamlets."

Building homes and establishing people on the land was the solution which Dr. Swann gave to many of the problems of the day. The West had suffered because the people had been exploited when the people should have been building homes.

"We get things too cheaply and we are just fooling ourselves as consumers. We need a few men who can give us the vision splendid and destroy the spirit of defeat."

Five If Tag Not Removed

Umbrella looms in London are no longer trailing around to lost property offices and departments in the search of the missing article. Some one had a big idea and it is working smoothly. The umbrella loom receives a card telling the lost has been found. All that has to do to obtain this service is to fasten an address clip to the umbrella.

Studio—So the present exploit you. How did you take it?

Ex-Studio—I congratulated him on turning out such a fine young man.

George Washington was not a signer of the Declaration of Independence.

Speed Record For Train

Makes Non-Stop Run From Denver To Chicago

Railroad men and public alike were wondering what changes in land travel must be expected with the advent of the all-steel, streamlined train, the newest of which recently made a non-stop run of 1,015 miles in 13 hours and five minutes, averaging 77½ miles an hour.

Running without a stop from aurora to sunset, the Burlington railroads' "Zephyr" swept into Chicago with new records for non-stop runs and sustained, high speed. It had travelled from Denver.

The Zephyr sped 98.3 miles at a sustained velocity of 90 miles and reached a peak of 112.5 miles per hour which it held for three miles, beating its own previous mark by three miles.

The little car, of stainless steel, also shattered the record of Britain's proud Royal Scot which had set the non-stop mark by travelling 56 miles an hour for 401 miles.

A 60-horsepower Diesel motor pushed the moderate train along the better than 13 hours between the breaking of time tags at Denver union terminal and a similar one at Halsted street station at Chicago without a miss. Every inch of the long route was polished. Every high way and country lane was roped off to give the three-coach Zephyr the clear right of way.

Giant Cricket Found

Discovered By New Zealand Naturalists On Northern Island

The cricket on the earth now has a newly-discovered giant cousin who lives on a little island off the northern coast of New Zealand. Its body is larger than a man's thumb and its legs would more than reach a saucer. This mammoth of the cricket family was discovered in a recent expedition made by members of the scientific staff of the Auckland Museum to the North Kaitake Island about 100 miles north of Auckland. New Zealand has a species of crickets which are known as velvet crickets. The velvet is the biggest member of the cricket family, being slightly larger than the Australian giant cricket. But the one found on the island is the largest ever seen by New Zealand naturalists.

Twenty snails, eight overcoats, 12 hats, and 24 pairs of boots and shoes, with other garments in proportion, are necessary for the well-dressed man, according to American experts in male fashions.

It is said that small trout transplanted to New Zealand waters grow as large as the salmon.

Necessary To Take Steps To End Causes Which Are At Root Of World Wheat Problem

Shelter Belt Information

Proper Number Needed To Determine Shelter Of Trees Required For Given Area

In the assistance given by the Dominion Department of Agriculture to prairie farmers in planting tree shelter belts, it has been found that applicants living at a distance or where an inspector has been unable to make a visit have not given sufficient or clear enough information to enable the Forest Service to figure out the required number of trees. In many instances the full length and breadth of the land prepared for planting the shelter belts have not been given, and the position and distance of the permanent buildings from the proposed belt have been frequently omitted. To rectify this, a short circular has been issued on how to make a sketch of the proposed shelter belt by the superintendent of the Forest Nursery Station, Indian Head, Sask. It is important when an applicant sends a rough sketch of the shelter belt in Indian Head or to the station at Sutherland, Sask., that the measurements must be shown, both length and breadth, of all ground ready for planting; also the distance between the inside of the proposed belt and any permanent buildings, and the position of any existing plantations or belts of trees. The measurements should be given in yards, not in rods or feet.

Wholesome Canned Fruit

Method Of Packing

Among the requirements of the Meat and Canned Foods Act and regulations with regard to the packing of cold pack fruits, all the fruit must be sound, wholesome, and fit for human food. All fruit must be well washed in clear water; then thoroughly drained before filling into the containers. The containers, such as barrels, cans, etc., must be clean and thoroughly sterilized before filling with fruit. The fruit must be graded for quality. The requirements of such grades of quality must be consistent with the established grades of quality for the same variety of fruit for canning. Packers of cold pack fruit are required to keep records of the total weight of fruit and sugar used each day, and only proper approved processes must be used in the preparation and storage of all cold pack fruit.

Strick Regulations With Regard To Method Of Packing

This state of affairs, which defies adequate description, is calculated to bring the world's wheat to disaster. It savours of an economic farce; but the large numbers of undernourished and even starving people in the world give the farce a tragic twist. It is earnestly to be hoped that the Advisory Committee will at last face the real wheat problem and take steps to solve it speedily. The responsible authorities of the importing countries must realize that unless they are willing to accept the wheat of the exporting countries they are condemning their own "manufacturers" abroad. Similarly, the governments of some of the exporting countries should be held responsible for the ruin of a large proportion of the agricultural community. Tackled on these lines, the wheat problem is no problem of solution. The future of the grain wheat-growing countries seems assured in years to come, since the present wave of economic insanity will no doubt pass; but the urgency of the problem brooks no delay.—The Economist.

All That Is Needed

Canada Will "Get Places" When Trade Picks Up

"Quite frankly, the subject of this advertisement is to stimulate business," says the heading at the top of a Canadian National Railway advertisement now running in Canadian newspapers. After all, that is all the Canadian railways, public and private, need to put them on the highroad to success. That is all any business in Canada needs—more business. Back in the 1920-1929 period, the Canadian railways could hardly keep up to the business in sight. Canada was doing more than \$2,000,000 trade annually, and we were getting places. The railways were carrying the freight. Railways were busy. These times will come again when we decide that the way back to prosperity is to trade. That means cutting through the obstacles, both internal and external.—Lethbridge Herald.

Death Ray Apparatus

G. B. Chadwick, a scientist in England, is the inventor of a death ray apparatus that is capable of producing a high frequency electrical oscillation of 300,000,000 cycles between two copper plates. Actual experiments have shown that insects, mice and rats which have come in contact with the ray were killed instantly without so much as leaving a mark of violence on their bodies.

A parachute, which resembles a giant seed of a maple tree, and which will permit a man to drop packages from low altitudes, has been invented.

CANADA'S MINOR CROPS

By many people outside of Canada wheat is considered the only important item of Canadian agricultural production. To those having this impression, it may be a matter of considerable surprise that less than half the farmers of Canada raise wheat and that between 1925 and 1929 only about 25 per cent of the total agricultural revenue was derived from that source. In 1933 this proportion was reduced to 16 per cent.

The gross value of Canadian agricultural production in 1933 was officially estimated as amounting to \$762,000,000. Of this total only \$123,000,000 was derived from wheat. Between 1925 and 1929 the gross agricultural revenue of Canada varied between \$1,600,000,000 and \$1,900,000,000 and the average return from wheat in those years was \$435,000,000.

The agricultural production classed as field crops, including wheat, have been responsible for about 60 per cent of Canadian farm revenue. In the past farm animals, including hogs, have brought in about 11 per cent of total farm revenue, dairy produce about 17 per cent, and poultry and eggs together about 5 1/4 per cent. It should be noted that in 1933 the proportion derived from dairy products had increased to 22 per cent. To Canadians who know Nova Scotian or Okanagan apples and the fruit orchards of Ontario it may seem strange that the fruit and vegetable industry of Canada has been responsible for only 2 1/4 per cent of farm revenue. In 1933 the proportion was a little more than 4 per cent. Maple products, fur farming, flax fibre and wool together have brought in about one per cent of farm revenue, and this leaves tobacco and other items bringing in about one per cent of the total. In general the items mentioned in this para-

graph make up that 40 per cent of farm revenue not included in field crop.

JUST FOR FUN

She:—It's raining.
He:—Yes.
She:—Do you think it will stop?
He:—It always has.

Just before Christmas a college professor read the following on an examination paper: "God only knows the answer to this question. Merry Christmas." Across the paper the professor wrote: "God gets an A, you get an F. Happy New Year!"

Chas. Lamb was giving a talk at a mixed gathering and somebody hissed. "A stunned silence followed. Then Lamb calmly said: "There are only three things that hiss—a goose, a snake and a fool. Come forth and be identified."

The late Uncle Joe Cannon was telling Chauncey Depew about a fish he had almost caught. "About the size of a whale, wasn't it?" asked Mr. Depew, softly. "I was baitin' with whales," answered Uncle Joe.

The Use Of Leisure Time

Knowledge Of How To Properly Use Leisure Time Is Necessary

"Leisure is a form of death; inattention is an aspect of life," wrote Darwin. Pigeon, yet from evidence which has recently come to us from America, it appears that life may sometimes actually depend upon habit. The life of the American routine worker, particularly among machine or in laboratories, tends to be closely conditioned by his work. "The record of such men," says a writer in the Scientific American, "shows that, once he is taken off his life-long bench or lathe or desk, the retired man wanders in a sort of daze, lost in a strange life of leisure, and rapidly loses interest in life and often dies quickly." The writer therefore puts forward a plan to provide "work-interest" for retired men.

He suggests that great industrial firms like Westinghouse, General Electric, or Eastman Kodak should set aside a shop-laboratory in which pensioners where they may engage in hobbies or apply themselves to inventions. "A paid superintendent, to keep these happy and peaceful mind," also be an instructor in hobbies such as the making of machinery models, radio-electric instruments, or delicate scientific instruments. It may be true that the provision of work interest would provide the lives of pensioners but it is more difficult to believe that inventions or discoveries may emanate from them.

When they have a life-time of training behind them; and that this will simply apply the firms for the initial education on their behalf.

Indeed, according to the testimony recently given by Major F. A. French, so far from pension work is more likely to banish all possibilities of it. Even the laboratory work of Major French is not a hobby, but a becoming mechanic. But the problem which the American plan raises is a serious one and sooner or later highly industrial nations will have to face it. It is in fact only part of a more general problem, the training of the workers in the right use of the beautiful leisure which the progress of industry promises us.

When he arrives at his retiring age, a worker possesses, besides the skill in his work, knowledge of how to use his leisure, he need not fear the sudden expansion of that leisure. It is reasonable to suppose, for example, that an Italian worker will be in a better position when his time comes to retire than his American counterpart.—The Listener.

Greenly Land

Chained Carrier Put This Island On The Map In 1834

Jacques Cartier put Greenly Island on the map long before the ending of a trans-Atlantic flight from east to west on its barren shores where it was thought it was not worth the effort; for it was on the island the French explorer and navigator first set foot in 1534 in what is now Canada. Dr. Harrison Ford, of Ottawa, told the historical section of the Royal Society of Canada at Quebec, a new note was introduced into the so far unsolved problems of the formation of molten rocks, mountains, plateau-boulders, and volcanoes by J. B. De Laury, of the University of Manitoba. He reported the Canadian shield composed of pre-Cambrian rocks was considerably older than other portions of the earth's crust.

The Canadian shield exposed to erosion for half a billion to a billion years is under the theory, thermally dead, and unless it becomes submerged or covered by radio-active mineral-bearing sediments its store of igneous rocks and their associated metallic ores will remain stable throughout the rest of time.

J. B. Macdewey, of the University of Saskatchewan, also delivered a paper.

Selecting Poultry Stock

"All is not gold that glitters and not all that glitters is gold," says the old proverb. It is the inside rather than the outside of a bird that counts in selecting the breeding stock that will produce superior progeny. The test of a good breeder is found, not in the laying nest but in the progeny that are produced. The best stock produced by a given mating will not really count, and neither the crystal-gazer nor the phenologist can pick out good breeders by looking at them or handling them.—Morley A. Jull, U.S. Senior Poultry Husbandman.

W. N. U. 2049

BULGARIA'S FASCIST KING HAD STORMY RULE

KING BORIS III OF BULGARIA. QUEEN GIOVANNA AND PRINCESS MARIE LOUISE

King Boris, who is believed to have inspired the coup d'état that placed Bulgaria under a Fascist military dictatorship, is one of the few fighting monarchs left in Europe. Since he succeeded his father, King Ferdinand, in 1918, he has been kept busy quelling internal strife. Attempts on his life have been frequent, and, although he has declared he would rather be a working man than a king, he steadfastly refused to be driven off the throne.

He is a prince favorite with the Bulgarian army and, more important, with Premier Mussoveni of Italy. King Boris' marriage to Princess Giovanna of Italy in 1930 is said to have sealed a secret political understanding with Rome.

Bulgaria's King and Queen have one child, Princess Marie Louise.

Train Always Interesting

Olives Thrill While Motor Car Cannot Compete With

If railways ever disappear, in favor of airways, from the surface of earth, we shall still have to indulge ourselves with exhibitions like the one being held in London.

For young people at least, model cars and aeroplanes have never replaced the train—perhaps because youth loves their larger complications: their tracks, curves, junctions, sidings, signals and tunnels. A glorious affair to construct and manipulate!

And the model, like the real thing, is beginning to look picturesque and to remind us of Old England. A Russian of to-day, instead of denouncing the devastation of beauty by railway enterprise, would work out romantically eloquent paragraphs about the glory of engines that stick to their appointed rails (barring accidents), instead of careering to the public peril all over the roads, and, soon, all over the space above them.—London Daily Mail.

Invents Novel Device

Saddle Ash Tray In Idea Of Major Brewer

A novel device for preventing the starting of forest fires by smokers has been invented by Major Fred Brewer, of Jasper National Park, internationally known Rocky Mountain guide, it is revealed at Montreal.

The device consists of an ash tray which can be attached to the saddles of trail ponies in such a position as to permit the riders to deposit in it pipe ashes, used matches and cigarette stumps instead of allowing them to drop to the ground.

Hunger Marchers Sued

Because they deserted their wives to take part in a hunger march to London, several married men of Pife, Scotland, are to be prosecuted by the Public Health Committee of the Pife County Council. The wives and dependents of the marchers applied for police relief.

FANCFUL FABLES

The game of chess is taught in the public schools of St. Louis, Germany, children carry their chessboards to school and from school like books.

The first playing card was designed as an image man in a suit.

Anything But Enjoyable

Charles Dickens' Coolest Trip In 1848 Was Not Pleasant

"It is just like looking at Westminster through the wrong end of a telescope."

These are the words used by Charles Dickens, the great novelist, when he stood in front of the Nova Scotia legislature in the winter of 1848.

Dickens arrived in Halifax on the opening day of the season. Joseph Howe, who was the speaker in the House, told the novelist as he came ashore from the steamship H.M.S. Britannia.

Mr. Dickens and his wife, who were on their way to Boston, both agreed that the trip had not been a very pleasant one.

Shortly after leaving Liverpool, Dickens related, "I was awakened one night by a dismal shriek from my wife, who demanded to know if I could see any danger. I answered myself and looked out. The water jagged and leaped like a lively dolphin, and all the small articles were about except my shoes, which were stranded on a carpet bag, high in the air, and a couple of coal barges. Suddenly I saw them spring into the air and behold the looking glass, which had been nailed to the wall, sticking fast to the ceiling. At the same time the door entirely disappeared and a new one opened in the floor."

When I began to comprehend that the statement was standing on its head. A steward was passing and I called to him, "What do you call this?" He answered, "rather a heavy sea on art and a head wind." Dickens was very sarcastic. "Not so much in the ordinary sense of the word, I wish I had been—but in a form which I had never seen or heard described, though I have no doubt it is very common. I lay there all day, quiet and contented, with no sense of vexation, with no desire to get up or get better or get the air; with no curiosity or care or regret of any kind, save that I think I remember in the usual inattention of having a lazy joy, a sardonic delight (if anything so lithe) can be dignified with the title."

He played many persons who go out to the golf course to get away from the golf course. It is a very common mistake of taking the game too seriously. They play for the sake of playing, and the game makes this very same mistake of taking the game too seriously. They play for the sake of playing, and the game makes this very same mistake of taking the game too seriously.

Golf is only a game. So is bridge, and falling is just as much a game. The man who plays golf, bridge, and recreations to upset his normal physical balance fails to gain the benefit he should, and very often needlessly endangers his health. Just drive the ball and follow through.—St. Thomas Times-Journal.

Locomotive Has Short Life

Usually Ready To Be Scraped After Thirty Years

In the matter of ages of locomotives, the total combined ages of 3,031 locomotives in service on the Canadian National at the end of 1933 was 36,400 years, their average age being 12.7 years. The percentage of locomotives in service on the Canadian National Railway Magazine. At the end of 1933, 88.65 per cent. were ten years of age and over, 10.76 per cent. were between nine and ten years of age, 1.71 per cent. thirty-five years and over. From this it will be seen that a locomotive has a short life as compared with the human machine. Locomotives have their styles as do the feminine side of the human race, styles ranging all the way from eight-wheeled, moguls and ten-wheeled of the days of mid-Victorian times, to Hudsons, Mikados, Santa Fes and the Canadian National's own type of "Mountains" and "Northers" of the present day.

Locomotives in railway records are classified by letters as well as numbers. The last of the "A" class was scrapped in Montreal, N.B., in August 1931. The enormous increase in traffic during the war years and the increase in equipment to take care of it is reflected in the fact that in 1934, only twenty years old, 294, while the aftermath with its heavy traffic pattern is indicated in those fifteen years old. Styles in locomotives are moving definitely toward the newer types such as oil-electric, Montreal, Santa Fe, Mountain and Northern types.

Best Harley For West

Of recent years, a number of promising short-armed harleys have been produced by different plant-breeding institutions, including the Dominion Experimental Farms, but these varieties have not yet been tested for a sufficient length of time to say which is the most desirable. For the present, however, the variety called Velvet is favoured in Eastern Canada, while Regal appears most promising in the West.

Two charwomen were discussing children carry their chessboards to school and from school like books.

The first playing card was designed as an image man in a suit.

The game of chess is taught in the public schools of St. Louis, Germany, children carry their chessboards to school and from school like books.

WORLD HAPPENINGS
BRIEFLY TOLD

The British Parliament legislative council adopted a bill restricting fur production in conformity with the London agreement.

France and Great Britain plan to consider jointly the problem of debts owed to the United States at a meeting of envoys in Geneva.

Forty aborigines and whites have perished in Western Australia, victims of a mysterious disease, the Daily Herald's Australian correspondent has cabled.

Hints are heard that a new move would be made to get Germany back into the tottering world disarmament conference. The move was said to involve about the United States.

The body of Sam Bahan, Portsmouth penitentiary convict who died suddenly of a heart condition, has been claimed by his widow and has been sent to Brooklyn, N.Y.

Half a million dollars were deposited recently in the Moose Jaw river at the Wild Animal park by officials of the department of natural resources.

Definite adoption of a pacific attitude and commitment of the organization of public opinion in the interests of peace was made at Toronto at the conference of the Association of Canada Clubs.

Birth of five daughters to Mrs. Olivia Dionne near Callander, Ont., the first quintuplets born in Canada. So far as is known, Dr. F. C. Routledge, general secretary of the Canadian Medical Society, said.

The shipments of livestock from Western to Eastern Canada during the first 17 weeks of 1934 and 1935 (latter figures within brackets) were: cattle, 29,267 (21,135); calves, 164 (181); pigs, 5,500 (18,992); and sheep, 40,222 (32,245).

Low Price For Planes

British Sets Recommended Figures For Two Hundred Dollars Each

Aeroplane entirely reconducted and capable of doing 120 miles an hour, price—\$200!

The British air ministry has sold many of these aeroplanes at prices usually given for second-hand cars. They originally cost \$30,000 and were built as fighters, with engines which cost at least \$5,000. They are in perfect condition and are almost as serviceable as when new.

There is one which is now on offer for \$350, but for the extra \$150 you get a spare engine, two spare wings and the all-important certificate of airworthiness. The engines are of a world-famous make and in tip-top condition.

These machines and engines are obtainable at these crazy prices because they have been superseded by later fighting models. While light aeroplanes can be used fairly cheaply, these powerful machines cost so much to run that few private owners can afford to run them.

Scientists have been unable to determine the particular group of animals to which the gun of the African plains is most closely related. It bears a close resemblance to other animal species, the horse, the antelope and the ox.

A bee has been found to travel 43,776 miles in gathering one pound of honey.

Plenty And Poverty

Canada Is Well Stocked With Nourishing Foods

If old man "Plenty" should drop in unexpectedly he would find Canada's public life homes well-stocked with nourishing foods.

According to a recent bulletin the butter in cold storage warehouses and creameries on May 1st amounted to 2,515,091 pounds of creamery and 11,461 pounds of dairy, the creamery butter total including approximately 380,000 pounds reported by firms added to the 1st since March 1, 1934. Cheese stock, total 9,565,423 pounds. Eggs in cold storage amount to 3,105,377 dozen; fresh eggs 610,814 dozen, and from eggs 528,126 pounds. Fresh pork not frozen 3,327,727 pounds; fresh lard 11,350,792 pounds, and cured or in cure 17,254,676 pounds. Pure lard in storage amounts to 3,800,703 pounds. Beef stocks total 4,203,621 pounds of fresh frozen, 4,544,000 pounds of fresh not frozen, 191,591 pounds of cured, and 108,723 pounds of beef in process of cure. Fresh frozen veal totals 513,319 pounds; fresh not frozen 642,800 pounds. Mutton and lamb stocks total 1,784,008 pounds of frozen and 137,119 pounds of not frozen. Poultry stocks are as follows: Broilers, 87,769 pounds; chickens, 2,778,877 pounds; fowl, 674,797 pounds; ducks, 78,678 pounds; geese, 70,435 pounds; turkeys, 2,160,294 pounds; and unclassified poultry, 986,719 pounds. Fresh and frozen fish and sea foods, 5,400,000 pounds of fish, and there are also 3,085,414 pounds of smoked, dried, pickled or salted fish.

Scientists have a slow eddying of oxygen with a substance which develops into active burning, and this is the case with the combustion of the stem to its kindling temperature, and so the process continues until the whole of the stem is at kindling temperature, and burns. As long as a substance is cooler than its kindling temperature, it cannot burn.

Sometimes we have a slow eddying of oxygen with a substance which develops into active burning, and this is the case with the combustion of the stem to its kindling temperature, and so the process continues until the whole of the stem is at kindling temperature, and burns. As long as a substance is cooler than its kindling temperature, it cannot burn.

Little Journeys In Science

(By Gordon H. Quest, M.A.)

Combustion of a fuel has been shown to be the rapid chemical combination of the material with oxygen, accompanied by the production of heat and light.

The temperature to which a substance must be heated before it will burn is known as the ignition or kindling temperature. We know that paper and wood will ignite more easily than coal. When we use a match to light a fire, we rub the match-head until friction has heated it to its kindling temperature, and the tip burns. The heat of the burning tip raises the temperature of the stem to its kindling temperature, and so the process continues until the whole of the stem is at kindling temperature, and burns. As long as a substance is cooler than its kindling temperature, it cannot burn.

Scientists have a slow eddying of oxygen with a substance which develops into active burning, and this is the case with the combustion of the stem to its kindling temperature, and so the process continues until the whole of the stem is at kindling temperature, and burns. As long as a substance is cooler than its kindling temperature, it cannot burn.

More Valuable Than Gold

New Zealand Miner Found Feathers Of Extinct Bird

Treasure more valuable than gold has been found by a gold miner in New Zealand. It is a box of 70 feathers of the now extinct huia bird. Experts say that the miner who collected the beautiful feathers to adorn their chiefs, must have hidden the box more than 100 years ago. While working the bank of the Molyneux River, the miner found a package sixteen inches long. There was an outer wrapping of flax, woven fax matting, an inner of native cloth made from the bark of a tree, and inside was a roughly-cut Maori box with its handles of feathers. The huia bird has not been seen alive in New Zealand for 40 years. To the Maoris of old, who never learned the art of working metals, these feathers were more precious than gold, and they are treasured as by modern New Zealanders.

Scientists have a slow eddying of oxygen with a substance which develops into active burning, and this is the case with the combustion of the stem to its kindling temperature, and so the process continues until the whole of the stem is at kindling temperature, and burns. As long as a substance is cooler than its kindling temperature, it cannot burn.

A Cherished Possession

Original Death Warrant Of Scottish Queen Owned By Calgary Man

The death warrant which brought the lovely Mary Queen of Scots under the executioner's axe and shocked a nation which loved her, is in Calgary.

It was shown in a recent exhibition at the Curlioth Shoppe at the Hudson's Bay Company's store, and is one of the cherished possessions of A. W. Riddle, for many years an antique dealer and collector in London, England. It came into Mr. Riddle's hands from an English family named Howard, in whose possession it had been for several generations.

Signed by Queen Elizabeth in 1587, the warrant for the execution is now fragile and yellow, and its edges are worn, but the bold black writing stands out clearly, though far from legible. Neatness required of modern stenographers was apparently valued in the sixteenth century. For the warrant has many words crossed out, and others inserted above the lines.

The old style letters are further confusion for those who have been studying the document.

A copy of the London Times of 1860 noted beside the historic warrant, and large reproductions of wood-cut illustrations from the time of Queen Victoria.

Prince Albert, the Royal Consort. The wood-cut offer interesting testimony of the costume of the period, and the faces are still clear and delicately marked.

A chronicle of the British history of the story of the "Shooting Star," traced through intricate branches and trunk in finest of lettering. A book containing 270 pages of text and emblems, prices and the nobility of several European countries, goes back to the time of King Edward II, and Edward III.

The seals are of heavy wax on parchment, their lustre and vivid coloring very little dimmed by the passing of the hundreds of years. These, too, are from Mr. Riddle's valuable store of antiques, which also includes a fine collection of the early copies of Shakespeare and Milton.

Interesting Local Items

Mrs. Mannie's mother and
sister of Calgary, arrived Sun-
day to stay for a time.

Miss Herrington, of Medicine
Hat, was the guest of Mr. and
Mrs. R. S. Hodge over last week-
end.

Miss Evelyn Hicks, of Cal-
gary, arrived in town Saturday
to spend her holidays with her
mother, Mrs. E. Hicks.

Since the recent rains many
farmers in the Bigville district
are reseeded some of their land
which was blown out during
the dry, windy weather.

Acres sown to spring wheat
in the United States is the low-
est in 41 years. It is estimat-
ed that there will be 125 mill-
ion bushels less than domestic
requirements.

Mr. Wm. Henderson, who had
the misfortune to break his leg
last week, was able to return
from the hospital on Sun-
day. He is now progressing as
well as can be expected.

A good crowd turned out to
the Apron Sale and Strawberry
Tea held in the Parish Hall on
Wednesday afternoon of last
week. Bridge and whist were
played. The first prize for
bridge was won by Miss Orpha
Baker and the consolation by
Mrs. S. Baldry. In whist the
first prize went to Mrs. Sanderson
and the consolation to Mrs.
J. Podesta.

TOWN OF REDCLIFF

The Local Tax Arrears
Consolidation Act 1934

The Council of the Town of
Redcliff have by resolution de-
clared that the above Act shall
be applicable to the Town of
Redcliff, and any person wishing
to take advantage of the provi-
sions of the above Act, should
do so before the first day of
August, 1934, apply to the Town
in writing, (accompanied by the
sum of one dollar, which will be
applied on applicant's taxes in-
case the application is granted)
to consolidate the arrears of
taxes due on any piece of prop-
erty, and such application will
be duly considered by Council.

The Act only applies to cases
where more than one year's taxes
were in arrears as at the first
of January 1934. Full particu-
lars of the payments and dis-
counts and other matters con-
cerning the above Act can be
obtained at the office of the
Secretary-Treasurer.

To those who properly com-
ply under the provisions of this Act
all proceedings under the Tax
Recovery Act 1929, for sale or
otherwise, are suspended in re-
spect to the properties involv-
ed, and while the consolidation
agreement is in force.

Mr. Sid. Harper, of Olds Al-
bert, spent the week end in town
with his family.

Miss Elsie Smith, of Medicine
Hat was the guest of Miss Mar-
aret Moore last Wednesday.
Miss Moore entertained several
friends in her honor at the tea
hour on that occasion.

Mr. Peter Wooding, who has
been spending a short holiday
here with his brother Owen, re-
turned to his home in Calgary
this morning.

Mr. and Mrs. Ray Green of
Standard, Alberta, were visitors
in town last Sunday, the guests
of Mrs. Green's father, Mr. J.
Devitt.

Increase of nearly 100 per
cent in enquiries from prospec-
tive tourists is reported by the
provincial publicity bureau
which has been concentrating
on tourist publicity for the
last three seasons.

At least fourteen members of
the Ladies' Auxiliary to the
Legion went to Medicine Hat
last Sunday to participate in
the Decoration Day Ceremony
held at Riverside Park and at
Hillside Cemetery. The Pres-
ident, Mrs. P. McDermott and
the immediate past president,
Mrs. J. Kitchen, each laid a
floral offering at the foot of
the Cenotaph in memory of
our war dead.

Mrs. Jack Hope was the hon-
orary at an interesting pantry
shower on Thursday evening in
honour of Mrs. T. Davies, a
recent June bride. Games and
entertainment formed part of the en-
tertainment and after the pre-
sentation of a dainty collection
of gifts for which the bride
fittingly expressed her appreci-
ation delicious refreshments
were served.
